## Wireframing

## Web Page Layout

Website wireframing allows you to plan the layout of your website.

It is the process of making design decisions before they are implemented.

Wireframing can range from a simple skeletal framework to a detailed mockup of each page.

Spending time planning your site makes coding easier.

## Wireframing and Prototyping

# Web Page Layout

Here is an approach to wireframing that can be adapted to a variety of design projects.

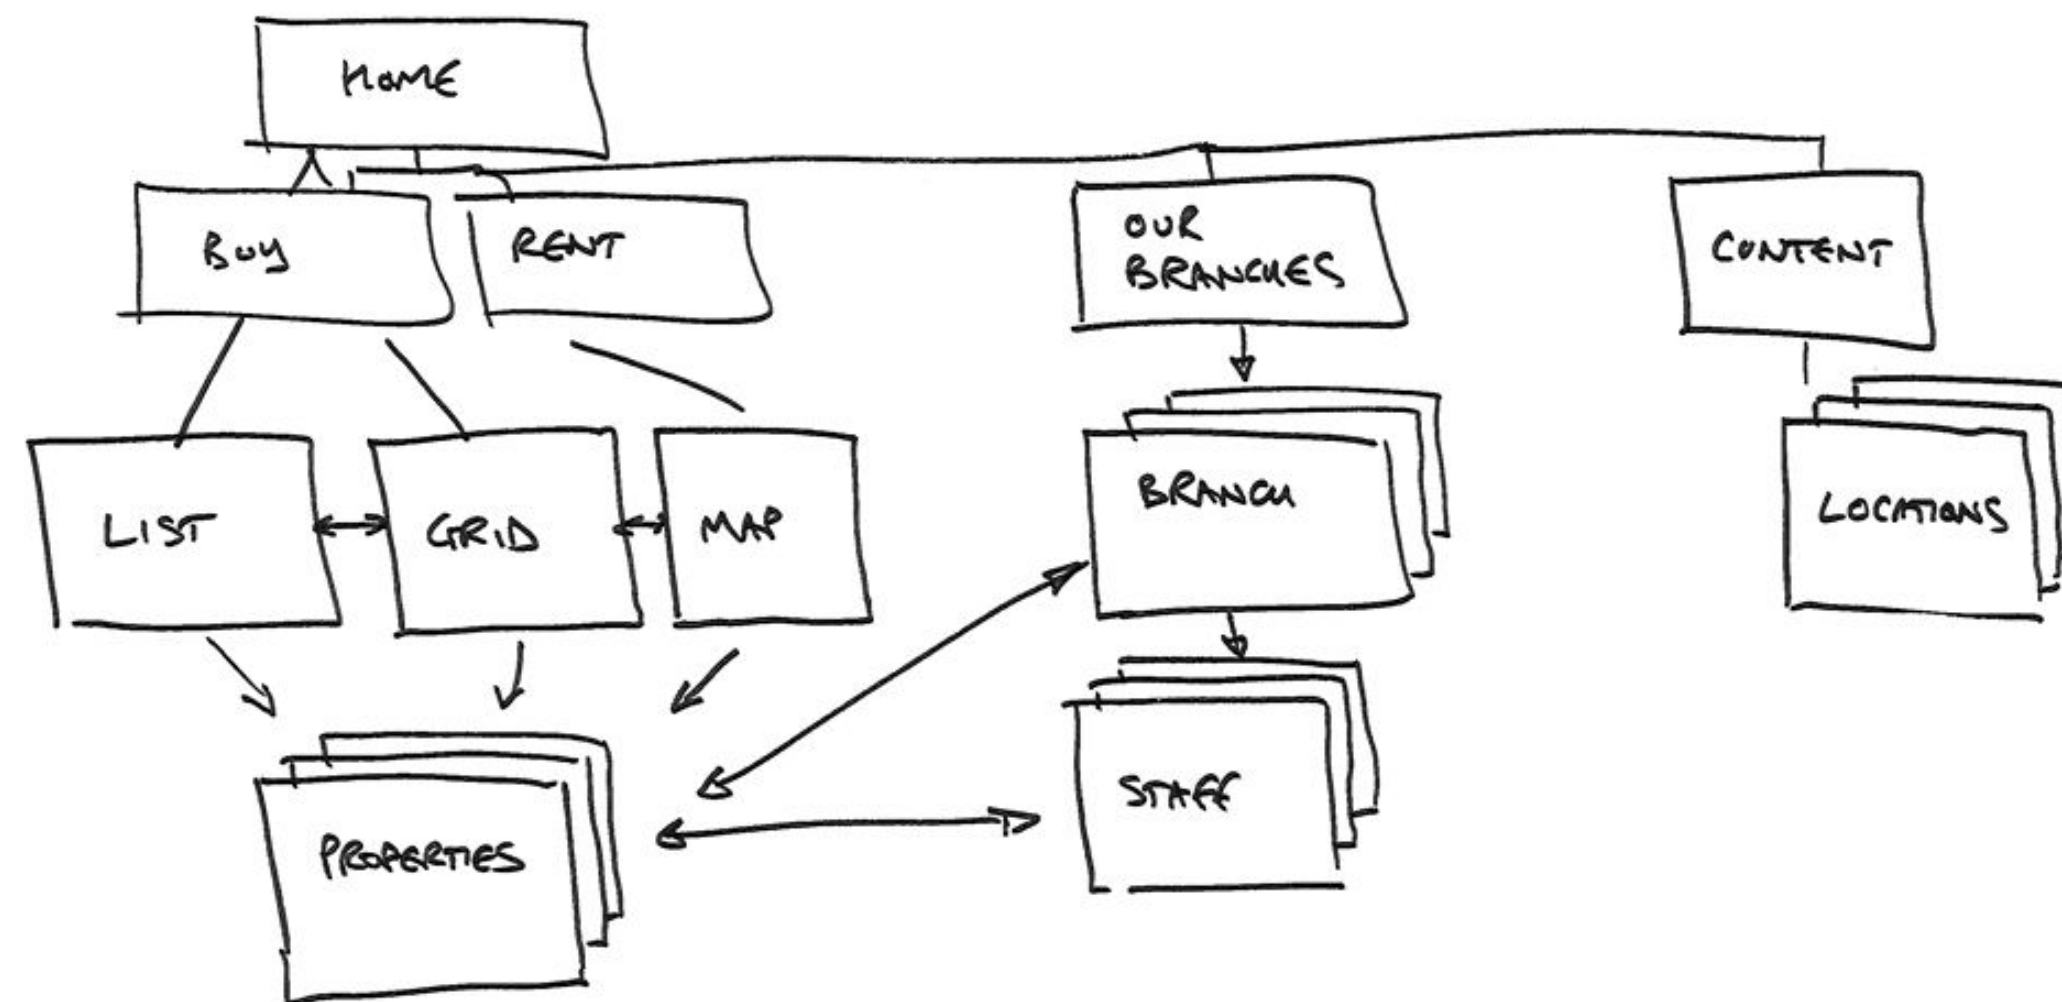

- Think
- Design
- Implement
- Revise

This sequence can be looped through as necessary.

## Page Layout

## Web Page Layout

There are several ways to design the layout of a web page with CSS.

- CSS float property
- CSS positioning
- CSS flexible box
- CSS grid

# Introduction to Web Design

## CSS Float Property

## Web Page Layout

The CSS float property allows you to position block elements inline

This means that any element, block or inline, can be positioned alongside another element

The CSS float property is an outmoded technique of web page layout

# Introduction to Web Design

## CSS Positioning

[https://i6.cims.nyu.edu/~mr6465/web\\_design/layout/css-positioning.htm](https://i6.cims.nyu.edu/~mr6465/web_design/layout/css-positioning.htm)

## Web Page Layout

The CSS position property specifies the type of positioning used for an element on a page.

static

Default document flow

absolute

Element is positioned relative to its first positioned (not static) parent element

fixed

Element is positioned relative to the browser window

relative

Element is positioned relative to its normal position

sticky

Positioned based on the user's scroll position

# Introduction to Web Design

## CSS Flexible Box

## Web Page Layout

Use the CSS Flexible Box Layout Module (Flexbox) for arranging items along one axis.

Flexbox consists of flexible containers and flexible items within.

A flex container expands items to fill available free space or shrinks them to prevent overflow.

In practice, flexbox can accommodate different screen sizes and different display devices more easily than the CSS float property.

# Introduction to Web Design

## CSS Grid

## Web Page Layout

Web pages are often laid out using grid systems.

CSS grids are intended to make this process more intuitive by defining a grid and then specifying where content should be placed within it.

The CSS Grid Layout Module can be used for the overall structure of a page.
